## Prompts

### Prompt

The Prompt component will send a message to the user if the user ever navigates away from the page.

We can import the Prompt component with:

```
import { Prompt } from 'react-router-dom'
```

We can reference the Prompt component using the `<Prompt>` tag.

```
<Prompt message="Are you sure you want to leave?"/>
```

## message

The Prompt component has a message attribute that contains a string that will be displayed to the user when they are attempting to navigate away from the page.

## when

The when attribute is a boolean that can be used to enable or disable the Prompt component. Set it to `false` when you want to disable the Prompt component and allow the user the navigate away without seeing a Prompt. The when attribute is set to `true` by default.

```
var notSaved = true  
<Prompt when={notSaved} message="Are you sure you want to leave w
```
